FRUIT AND ORNAMENTAL

TREES, SHRUBBERY,

AND

PLANTS,

FOR SALE AT THE NURSERIES AT

LINNÆAN HILL, ROCK CREEK,

NEAR WASHINGTON, D C.

JOSHUA PEIRCE, Proprietor.

WASHINGTON, D. C.

PRINTED BY WILLIAM H. MOORE.

1857.

∏*,31,34

REMARKS.

As trees are taken from the nursery, a label is affixed to each kind, marked with its proper name.

Those marked thus * will not be ready until the fall of 1857.

When trees are to be sent to a distance, they will be carefully packed in mats or boxes, at a small additional expense.

Persons wishing to purchase, are requested to call and select for themselves. Orders from a distance must either enclose cash, or refer to some one near, who will become responsible for the payment.

Orders left with John F. Callan, near the General Post Office, in Washington, Linthicum & Co., corner of Bridge and High streets, Georgetown, at the stall of the proprietor in the Centre Market, or forwarded through the Post Office, will be immediately and promptly attended to. Trees delivered in either place free of charge.

When trees are received that cannot be immediately planted, a trench should be dug, the roots well wet in water and laid in it, then covered with earth, pulverized so as to settle well about them, and prevent their drying; in this manner trees are often kept through the winter with perfect safety. When received in a dry and withered condition, it has been the practice of the Proprietor to bury them for two or three weeks in clean sand, such as used for building, covering the whole tree, body and branches. In this way, trees apparently dead, and pronounced worth nothing, have been completely resuscitated; and when taken out, in good condition for planting, the roots and sap vessels thoroughly replenished, in condition to receive and conduct the sap through every part of the tree.

The selection of Fruit for an Orchard being an object of the greatest importance to every person intending to plant, is attended with such difficulty, that often persons do not succeed in procuring it to their satisfaction. Sometimes, from the want of a knowledge and acquaintance with the quality of the different varieties, or two much confidence in the judgment and recommendation of those whose opportunities do not enable them to judge properly, often it happens that a Nursery does not present such a collection as suits the views of every purchaser.

The Proprietor, being frequently called on to select for others, deems it important here to give a few hints as to the considerations that should direct a choice, and by which he is pretty generally governed.

If the Orchard be near a town, and the fruit be intended for market, the size, appearance, and flavor of the fruit, should be important considerations, always having in view to keep up a constant succession.

from the very earliest to the latest. If marketing be not the object, a constant succession of such as are esteemed for kitchen use, as many of superior kinds as will suffice for the table, with some of the latest keeping; then let the bulk of the orchard be of such as possess the following good qualities: bear full, hang late, keep well, and make a

superior cider.

It must be obvious to every person of observation, that there is scarcely any apple that combines all the good qualities; those that are large and showy often are deficient in flavor or taste, do not bear well. or ripen too soon to be valuable; those that bear best often want other good qualities. We sometimes meet with those that are desirable and much sought for that have but a single advantage to recommend them. It is generally thought that certain soils and situations are more adapted to certain varieties than to others; those that flourish well in some districts are very inferior in others, and it not unfrequently happens that the greatest difference is found in different parts of the same orchards. I would recommend that particular attention be paid to the neighboring orchards. Let the soil and aspect be compared with that in which it is intended to plant; and, whilst seeking for new and far-famed varieties, always reserve a space for such as are known to succeed best in like soils and situations in orchards in the same particular neighborhood.

Cuttings of any of the varieties of fruit trees for engrafting, packed in a neat and portable manner, will be furnished at 25 cents per dozen;

not less than a dozen of any variety can be furnished.

Washington, on 14th street, where a stock of all the varieties of trees for the streets and lawns, of large growth, are constantly kept, offering a very convenient opportunity for citizens to select for themselves, and have them removed at an hour's notice, when ready to plant; an experienced hand is always in attendance to attend to planting, which will be done in the best manner, at a reasonable charge.

Arrangements are making to transplant trees of extra large size for streets and lawns, which will be planted so as to secure their growing, or no pay. Extra large trees will always be charged extra.

To have thrifty peach trees and fine fruit, the ground should every year be kept cultivated, by planting it with corn, potatoes, or other vegetables, and every autumn or spring have well-rotted manure dug in around the trees. Peach trees remaining more than one year in grass or sod ground become unthrifty and yellow. As it is a tree that soon comes to maturity, it is always thought better to supply the place of those that become diseased with young trees, than to attempt a cure.

PEARS, 50 cents. Pyrus communis.

m .- Melting. b .- Baking.

Small sizes \$35 to \$50 per 100. Largest Trees extra price.

GOOSEBERRIES. Ribes Uva-crispa.

Price 20 to 25 cents; \$2 per dozen.

A choice collection of the very best varieties received direct from

Liverpool.

This fruit requires a strong soil, which ought to be kept light and rich by digging in a quantity of well-rotted stable manure every fall and spring. No grass should be permitted to grow near the body of the bush; and a portion of the old wood should be cut away every fall, which will add much to the growth both of the bush and the fruit.

RASPBERRIES. Rubus idœus.

Brinckle's Orang, a very superior new variety, highly recommended for general cultivation; 25 cents single plant; \$2 per dozen; \$10

to \$12 per hundred.

Catawissa, a new ever-bearer or fall Raspberry, promises to be a a great acquisition; price single plant, \$1; one dozen, \$6; one hundred, \$40, packing included. Circular giving full history and description will be furnished on application by mail or otherwise. Antwerp white, 12½ cents.

Purple monthly flowering, 25 cents.

Scarlet prolific, strawberry color; this is mostly cultivated for market; 75 cents per dozen; \$4 per 100.

Franconia, 12½ cents; per dozen, \$1 25; per hundred, \$6.

Tastalf, 20 cents; per dozen, \$2; per hundred, \$10. Cushing, new, per dozen, \$1 50; per hundred, \$10.

Wilder, per dozen, \$1 50; per hundred, \$10.

BLACKBERRIES.

High Bush improved, 25 to 50 cents.

New Rochelle, or Lawton, 25 to 50 cents; per dozen, \$3.

White Blackberry, 50 cents to S1. This variety is said to be quite equal to the black. It has not fruited in this establishment yet.

STRAWBERRIES. Fragaria vesca.

Virginia Large Early Scarlet, 25 cents per dozen; 75 cents per 100; \$5 per 1,000.

Prolific Hautboy, 25 cents per dozen; 50 cents per 100.

Bush Alpine, ever-bearing, 20 cents per plant; \$1 per dozen.

British Queen, 50 cents per dozen. * Burr's Seedling, 25 cents per dozen.

Hovey's Seedling, 25 cents per dozen; \$1 per 100; \$5 per 1,000.

* McAvoy's Superior, 25 cents per dozen. Walker's Seedling, 25 cents per dozen.

Hooker's Seedling, a new variety of great merit, 25 cts. single plant. Alice Maud. This variety is now extensively cultivated about Washington as a market Strawberry; it is very large and prolific; 25 cents per dozen, 75 cents per 100, and \$5 per 1,000.

Peabody's New Seedling .- Good plants in pots will be ready to dis-

tribute in April at \$1 per plant.

FILBERTS. Corylus.

English Greenhusk, 25 to 37½ cents. English Redhusk, 37½ cents. Large Spanish, or Barcelona, 37¼ cents.

ORNAMENTAL EVERGREENS.

Trees of ordinary size for planting, 3 to 4 feet high, with balls of earth to the roots, will be delivered at \$1 per tree. Extra size at extra price.

| Large double white 50 cents to \$1 | Whitlejii. |
| Large double pink, 50 cents to \$1 | Humei. |
| Sweet scented, \$1 | |
| Tree paony, \$1 to \$3 | |
| single white, \$1 to \$3 | Papavevacea. |

RHUBARB, OR PIE PLANT.

Victoria, plants at 25 cents to \$1, according to size.

This variety is becoming cultivated in preference to the common kinds, in consequence of its large size. A single leaf will sometimes, with good cultivation, weigh $2\frac{1}{2}$ pounds.

ASPARAGUS.

Per 100 roots, 75 cents; per 1,000 roots, \$6.

HERBACEOUS, MEDICINAL, AND CULINARY PLANTS.

A considerable collection are cultivated, and will be furnished to order at reasonable prices.

INDIGENOUS SEEDS, OR TREES AND PLANTS.

Seeds of indigenous trees, shrubs, and plants will be collected to order, and put up for exportation, if required.

DAHLIAS, from 25 to 50 cents.

About 500 varieties of this splendid and much admired plant have been in cultivation ot this establishment, many of which cost from one to five dollars. The collection is now much reduced, comprising only the finest sorts—others being rejected.

ON THE PLANTING AND CULTIVATION

OF

ORCHARDS.

The first thing to be determined upon in the planting of an orchard, is the proper distance of the trees. If a mere fruit plantation be the object, the distance may be small; if the cultivation of grain and grass be in view, the space between the trees must be wider. At thirty feet apart, an acre will contain forty-eight trees; at thirty-five feet, thirty-five trees; at forty feet, twenty-seven trees; and at fifty feet, about eighteen to the acre: these are the usual distances. Taking every circumstance into consideration, it will probably be found that forty feet is the most eligible distance for a farm orchard; it will admit sufficient sun and air, in our dry and warm climate; and until the trees shall be fully grown, will allow of a profitable application of the ground to the cultivation of grain and grass.

Much trouble will be saved, and much accuracy in planting will be ensured, by marking the sites of trees by stakes, previous to digging the holes. In shallow soils, I would recommend making the holes of the depth of two spits of earth, scattering the lower spit at some distance, and supplying its place by an equal quantity of the neighboring surface earth; the depth of the hole must depend on that of the

sub-soil.

An eligible mode on the lighter soils, is to supply the place of the stratum of poor earth by one or two loads of meadow mud, ditch banks, or good surface soil, laid round each tree after planting; ploughing the ground for a fallow crop the next spring, when the mud has become completely pulverized by the frost; the size of the hole should be sufficiently large to admit a spade handle when laid horizontally in the bottom, affording ample space for the expansion of the roots in loose rich earth.
